

Food Seer

Food Seer simplifies daily food decisions by turning a brief conversation into a personalized meal recommendation. Built for a single restaurant's delivery system, it asks a few quick questions and offers a tailored dish customers can accept or skip. This reduces menu fatigue, streamlines staff operations, and enhances the dining experience. Future features include a memory-enabled AI chatbot and a feedback system to refine suggestions over time—for smarter, more engaging service across customers, staff, and administrators.

Stakeholders

1. Admin
2. Staff
3. Customers
4. Drivers

October Milestones

1. Come up with quiz questions
2. REST API endpoints
3. Base “Food delivery” setup (inventory, accounts, UI, backend)
4. Format restaurant information for easy readability for an AI

November Milestones

1. Ai chatbot to recommend food to the customer
2. Have a conversation history of each customer's interactions with the AI stored for better recommendations
3. Rating system for food recommendations
4. If users passes on recommendation, the system should ask if the customer wants instructions for an at-home meal

How much are you willing to spend per meal?

- Under \$10
- Under \$20
- Under \$30
- Other: Anniversary meal, no limit
